

Vice Mayor for Mayor!

Jim Gray: Model Citizen
By David Schankula

Allow me to go all Hegelian on our city leaders: Sometimes it is easiest to define what something is by what it is not.

And Jim Gray is *not* Jim Newberry.

Jim Gray is not a backroom dealer. Jim Gray believes the people's business should be conducted in the open and—get this—with their involvement!

Jim Gray is not a fool. He understands that a thriving community is built intelligently, not on the backs of multi-million dollar vanity projects.

Jim Gray is not, yet, the mayor.

What, then, *is* Jim Gray?

Jim Gray is a "Model Citizen."

Lexington's vice mayor for the past two years, Jim Gray is the CEO of an internationally renowned engineering firm, one of the "Top 20 Places to Work" in Kentucky. He is a member of the Board of Trustees at Berea College and at the KET Fund for Excellence—two jewels of the greater Bluegrass.

And while we might fault him his Vanderbilt education, Jim Gray is also a Harvard-recognized expert in Urban Planning.

Witness the Toyota factory in Georgetown—Gray was one of the primary contractors building it, infusing our community with good jobs and talented young people in the wake of IBM's exit.

Or look downtown. Just up the street from that yawning hole in the ground sits the headquarters of Gray Construction—the former Wolf Wile building, brilliantly and beautifully re-possessed as a piece of modern architecture subtly nestled amongst our Main Street storefronts, making a solid statement of architectural vision.

With a clear track record as an auditor of executive power, and a demonstrated interest in protecting and pro-

On March 4th, 2008, Lexington's Mayor Jim Newberry stood smilingly with local developer Dudley Webb (creator of various 1980s publicly-financed real estate boondoggles), and announced the CentrePointe development. For two years, Newberry and the Webbs had plotted the project without public debate.

Inasmuch as an abdication of leadership can be commended, it is unlikely the CentrePointe project could have withstood two years of community outcry at the level it received over just five months before the literal heart of the Bluegrass was blown up.

But we do with what we got, and from the moment Jim Newberry announced this monstrosity, a handful of our city leaders have stood up for the future of Lexington. Councilmember Don Blevins has been a bulldog on the mayor's behind, renouncing the project as "a vertical Lexington Mall."

And 1st District councilmember Andrea James has consistently sifted through the mayor's BS for just an ounce of truth.

Street at an underage party).

"If past performance is an indicator for future performance," Vice Mayor and Model Citizen Jim Gray asked our mayor, "what is the likelihood of this project's success?"

"Shouldn't we study our history and review what went wrong with downtown development in the 1980s and what role was played by these developers then?"

The block Jim Gray fought to save was, ultimately, demolished on his birthday. At this writing, it remains a pile of rubble.

Despite the Vice Mayor's repeated requests, there remains no proof the Webbs and their Mayor have the money to actually build this \$250 million empty fortress.

It is not just CentrePointe that has brought out the best in Jim Gray's leadership. For years he has been pushing a clear vision of downtown Lexington as a 21st century industrial mecca, establishing citizen task forces all along the way to keep the dialogue open.

And now there is the airport. A public wing of the city's government, *the Herald Leader* recently revealed that Bluegrass Airport's director had blown through \$200,000 traipsing around the world and sleeping in fancy hotels.

Mayor Jim Newberry's response? A shrug of the shoulders and a call for patience and understanding.

Vice Mayor Jim Gray's response? An immediate call for action, rallying the city council for a vote to request an official audit from the State. (Other council members opposed the audit, dismissively citing its roots in a 'newspaper article,' and others urged that the vote be postponed.)

Time after time, as the mayor has let money and opportunity slip through his fingers, Jim Gray has been there to do the mayor's job for him.

And while we might fault him his Vanderbilt education, Jim Gray is also a Harvard-recognized expert in Urban Planning.

Witness the Toyota factory in Georgetown—Gray was one of the primary contractors building it, infusing our community with good jobs and talented young people in the wake of IBM's exit.

moting Kentucky's history (he raised \$22 million for the state's History Center in Frankfort), Gray is also a fervent funder of the local arts and an annual supporter of our most important community organizations.

For all that good work, it is his past year of service to this community that has truly catapulted him into a new realm of Lexington lore. It is this work that has separated him from a crowd of wealthy businessmen who simply do good work in order to accrue political power.

Jim Newberry, he is not.

But it is Vice Mayor Jim Gray who has truly shined in this civic debacle.

While the city's mayor was writing emails to his citizens telling them to, and I quote, "*stay out of the debate*," Jim Gray was doing anything but.

Our Vice Mayor, an expert in urban design and development, attacked the CentrePointe project for defying "all models of responsible urban planning."

He called this fantastical hotel/condo Titanic "a massive fortress against our citizens."

Over and over, Jim Gray attacked the mayor for pissing away the city's \$500,000 master plan (yes folks, that's half a million taxpayer dollars our mayor wasted like a keg on Rose

In the end, though, having the dumb luck of not being born Jim Newberry is hardly the only determining criteria of who may be knighted one of Lexington's "Model Citizens."

But not being Jim Newberry doesn't hurt, and using your position of power to truly represent the interests of the people and the community that elected you—well, that doesn't just make him an ideal candidate for "Model Citizen," either.

It makes Jim Gray the next Mayor of Lexington. ■

David Schankula, a 2006 Model Citizen, is a founder of the Lexicon Project and a child of the city's 3rd District. He can be reached at aceweekly.blogspot.com and barefootandprogressive.com.

The Doctor is IN

Model Entrepreneur: Dr. Pearse Lyons

By Eric Patrick Marr

“Innovation will power us out of almost anything. America is a place where innovation drives huge business outcomes. It drives job creation. It pays our taxes. It’s created the wealthiest society on earth. We forget, in the middle of all this doom and gloom, that we have the strongest universities, the most creative people...”

—Eric Schmidt, CEO Google

In 2008, we’ve witnessed an historical Presidential election; we’ve seen the collapse of some mega Wall Street names; we’ve seen the American icons of General Motors, Ford and Chrysler jet to Washington looking for bailouts; we’ve seen an Illinois Governor blatantly attempt to sell a senate seat; we’ve seen Sarah Palin ignore a turkey being beheaded and shredded; and we’ve seen shoes thrown at President Bush in Iraq. Locally, we’ve seen the good ol’ boy network of Lexington conspire to grant us a theoretical hotel. Clearly, our city, our state, our nation and our world needs authentic leadership like never before in our history. We must dare to be different, we must dare to think new thoughts, to take new paths, and to find serious answers to serious problems.

Alltech founder and president Dr. Pearse Lyons is a self-professed “recession atheist.” The way he frames it, “crisis” in Chinese consists of two words —danger and valuable opportunity; therefore, crisis — what does it mean? Valuable opportunity.

“His entire business career has been about his vision and his love affair with Kentucky.”

—Jim Host, on Dr. Pearse Lyons

As a recent guest speaker at UK’s Patterson School of Diplomacy, Dr. Lyons, pointedly mapped out his pathway to business success, even in turbulent times. “First, identify the problem,” he said. “Second, do research. And third, provide the answer.”

The company provides over 300 jobs to Central Kentuckians just in Nicholasville (1800+ worldwide).

Partly because of their sponsorship of the 2010 World Equestrian Games, Alltech is a household name in the Bluegrass.

Dr. Lyons is credited by many with dragging the bluegrass economy (kicking and screaming) into the future.

This global animal health company employs more than 1,800 people and has a presence in 85 countries around the world, with sales over \$500 million.

Jim Host says, “I first met Dr. Lyons in 1977 when he came into my office with his vision of Gasohol — His entire business career has been about his vision and his love affair with Kentucky —I consider him Kentucky’s greatest sales-

man world wide. His offices and manufacturing plants all over the world are built with the Kentucky look. His company is rapidly becoming one of America’s greatest companies in bio-tech development.”

For such a large company, Lyons is known for making decisions quickly, and locally. When Jim Host asked Alltech to be the title sponsor of the games, Lyons said yes in about 10 minutes. He claims this is the most expensive cup of coffee ever, but he thinks it’s the best decision the company has ever made, echoing what Bill Gates has said (if he was down to his last dollar, he’d spend it on P.R.)

Colleague Bill Cheek reminisces as fondly as Host does. He says, “In the early 80s Dr. Lyons and I were meeting in Muleshoe, Texas. The purpose of the trip was for Dr. Lyons to conduct a class at an ethanol plant located a few miles from Muleshoe. We both arrived, driving our own vehicles equipped with C.B. radios, late at night. Dr. Lyons decided to go to the plant the next morning, leaving at 4.30 AM, to set up the class room and return to Muleshoe for breakfast prior to the meeting at 7 AM. We left at 4.30 AM and it was pitch black outside and Dr. Lyons was following my car. After several miles using the C.B., I told Dr. Lyons I thought we had passed the road to the plant. He said ‘let’s make a U turn and you follow me.’ After a few miles, two headlights were coming directly toward Dr. Lyons’s vehicle at a high rate of speed. It was a semi-truck and at the last minute the truck swerved to his right avoiding a head-on collision. The truck driver then said on his C.B. : ‘LOOK OUT ALL W/B TRAFFIC, TWO IDIOTS WHO MUST BE DRUNK ARE GOING

THE WRONG WAY ON THIS DIVIDED HIGHWAY —I’M LEAVING THIS CRAZY STATE AS QUICKLY AS POSSIBLE.’ When leaving Muleshoe the road divided to two lanes each way and we did not notice the split.

When I questioned Dr. Lyons why he didn’t swerve he said it was a game of ‘CHICKEN’ and he wasn’t going to swerve. It turned out if he would have swerved, he wouldn’t be with us today.”

Considering the fact Alltech is now growing at an annual clip of 20 percent, it is clear that the Bluegrass’ own Dr. Lyons doesn’t swerve. He has a plan. #1. Identify the problem #2. Do research #3. Provide the answer.

Compare that, for instance, with many things we see around us at work, in government, in the media, at home. The first one is easy: A TON of people are adept at identifying problems. Often, incessantly. If that was the only skill required, we’d all be billionaires. Where Dr. Lyons begins to distinguish himself, and Alltech, however, is in Steps Two and Three.

Alltech IS research.

Alltech hires researchers and equips researchers. They provide \$200,000 in research scholarships to PhD students.

Alltech funded the \$20M Nutrigenomics Center at UK and its 40 new R & D jobs. Alltech builds one science laboratory per year, for young children.

However, what is even MORE difficult, and what really separates the men from the boys, is in Step Three —providing the answer. And in today's chaotic times— when the economy is seemingly disintegrating all around us, people are losing their jobs and houses left and right, bailouts are being sought, the global environment is wilting every year, there has NEVER been a time when answers and solutions are needed more. Today's times call for serious research producing serious solutions, and Lexington is fortunate to have Dr. Pearse Lyons call the Bluegrass his home.

Who else around here ponied up \$10M to bring 600,000 visitors to Lexington for the 2010 World Equestrian Games?

Who else openly states that his goal is to “superbrand Kentucky” as well as superbrand his own endeavors?

Who else travels the state, preaching encouragement and possibilities, when most others are harping on what CANNOT be done?

Our region's leaders could learn from Dr. Lyons — seiz-

ing crises and transforming them into opportunities. Turning water into wine, or in his case, converting algae into biofuel.

In addition to sponsoring the World Equestrian Games, Lyons and Alltech have launched their statewide Fortnight Festival for the Arts. Lyons says, “As I toured the state last fall, I realized we needed something above and beyond the Alltech FEI World Equestrian Games, something to bring the state together, and something for which everyone could be excited. Music is the great communicator, and we believe this one-of-a-kind entertainment festival will put Kentucky on the map.”

Working collaboratively with Centre's Norton Center for the Arts, UK's School of Music, LexArts and the Kentucky Arts Council, Alltech is conducting an ongoing series of top-shelf concerts leading up to the 2010 Games. Recognizing the foundational role that arts and culture play in a region's economy, Dr. Lyons has unquestionably dared to be different, once again. Having begun already, here in 2008, scheduled to blossom nicely in 2009, and culminating in 2010 with fourteen days of major performances, in venues and stadiums around the state, Alltech's Fortnight Festival is already transforming the cultural landscape of the Commonwealth (<http://www.alltechfestival.com/events>).

Plugging up the Brain Drain

Alltech sponsored the first PhD student for the Margin of Excellence Fellowship; serving as role model to other businesses to sponsor more PhD students and encourage them to stay in the Commonwealth.

Dr. Lyons always refers to PhDs as being Poor, hungry and Driven. He says that we want them Hungry for success and driven, but not poor and certainly not really hungry. He says that we should pay PhDs like they are the future, because that's what they are.

Margin of Excellence:

The Margin of Excellence program was developed by Alltech as a means of rewarding the dedication of graduate students in the study of science while promoting technology

and development in Kentucky. The fellowship is a stipend of \$40,000 per year for a maximum of five years for each graduate fellow. This stipend is in addition to any awards given by the university.

“This program is very exciting to us because it attracts brilliant, young minds to our state,” says Lyons. “We believe Ph.D. should no longer be an acronym for Poor, Hungry, and Driven. Students have to put their lives completely on hold to further their education because today's doctoral studies take an average of five to six years to complete. We want to reward the dedication and enthusiasm of these students by enabling them to focus entirely on their studies.”

In addition to the yearly stipend of \$40,000, the fellowship provides funds for travel to conferences and other laboratories, bonuses for extraordinary performance, mentoring, and unique links to the industry. Since one of the primary goals of the Margin of Excellence Program is to attract and retain talent in Kentucky, students will receive a retention bonus of \$10,000 if they remain and work in Kentucky for three years following completion of their fellowship.

“With a maximum potential sponsorship of each fellow at \$200,000, this is a significant investment for Alltech,” says Dr. Lyons. “However, we believe the backbone of the future is the education of our youth.”

www.alltech.com/en_US/media/releases/Pages/MarginofExcellenceProgram.aspx

Alltech Young Scientist Program:

Alltech's Annual Young Scientist Program is traditionally held for undergraduate students, this year a second category was added to include graduate students.

A commitment to research and young people is essential to both the success of our industry and to Alltech. The Alltech Young Scientist Program is designed to encourage students to enter the field of animal science,” says Lyons. “With the dramatic increase in applicants during the first three years, I think we have a bright future.”

“The Alltech Young Scientist Award has given me and others like me an opportunity to begin leaving the shores of the classroom and wading into the waters of professional research,” said Craig Louder, 2008 winner. “It has been a tremendous learning experience and I encourage any student who is interested in science to take advantage of this opportunity.”

Louder, a student at Utah State University, won with his paper entitled, “The Estrogenic Mycotoxin Zearalenone and its Importance in Livestock Production.” He joins 2007 winner, Lucas Mascardi from the University of Buenos Aires, Argentina, and Matthew Scobie from the University of Saskatchewan, Canada, the 2006 winner.

To participate, students must write a scientific paper based on a topic about animal feed technologies. Undergraduate students' papers must be 3000 words in length and graduate students' papers must be 5000 words in length. The program will include two phases: the regional phase and the international phase. The deadline for submission is February 27, 2009.

www.alltech.com/en_US/media/releases/Pages/Alltech'sYoungScientistProgramKicksOff20082009.aspx

In 2006, there were 86 applicants for the Alltech young Scientist Program

In 2007, there were 201 applicants for this program

In 2008, there were 750 applicants for this program

Bringing Science to the Classroom:

At Seton Catholic School in Lexington, Kentucky Alltech's team built and installed a teaching laboratory outfitted with science equipment and supplies. These projects are continuing at other schools in the area because encouraging the enthusiasm and imagination of students at an early age is important. The fifth laboratory is currently under construction.

Close to Alltech's headquarters in Kentucky, employees participate in a mentoring program for The Providence School, a non-traditional public school. In Central Europe, Alltech staff are working with young people in ways others might overlook, sponsoring youth programs that include games, music and theatre.
